

F770

Reliable large-scale printing in a user-friendly, affordable system.

The F770[™] offers one of the largest print volumes among Stratasys FDM[®] systems. With over 13 cubic feet of build volume and the widest build chamber (X direction) of any Stratasys FDM printer, the F770 provides the capability to build large parts or sizable assortments of smaller parts.

The F770 features industrial-grade technology for consistent, reliable performance and accurate results. Available model materials include two industry standard thermoplastics available in three layer thicknesses (slice heights). Soluble support material enables complex designs and hands-free post-processing.

GrabCAD Print[™] software powers a streamlined workflow by printing directly from CAD files. Insight[™] software is also included for more in-depth print file adjustment. The F770 is equipped with MTConnect, a manufacturing communications protocol, for factory-floor connectivity.
